

Controlling a vending machine with a VendingMiser will have the same annual environmental benefit in terms of CO₂ reduction from energy savings as planting a half-acre of trees or not driving a car 1,200 miles.

VendingMiser[®] REBATE PROGRAM

Want a partnership that pays?

It's midnight. Everyone's gone home. Why is your vending machine on? Vending machines typically use electricity 24 hours a day even if no one is around to use them. As your local utility, we offer rebates on VendingMisers that control vending machine operation by detecting motion while maintaining the temperature of the product.

commercial & industrial

VendingMisers save energy and money by using a motion sensor to automatically power down the vending machine when the area around it is unoccupied, and power up the machine as a potential customer approaches it. While powered down, a temperature sensor powers the machine back up as needed to keep drinks cold. One unit can be used to control up to four vending machines that are located near each other.

By installing a VendingMiser, you can:

- Save 24-36% of the electricity consumption of a vending machine
- Reduce maintenance costs and extend vending machine life by reducing lamp use and number of compressor cycles
- Get payback on your investment in about two years

Do you qualify?

All business customers we serve are eligible for rebates. Applicant must be the end-user of the VendingMiser. The VendingMiser installation must meet the following conditions:

- Refrigerated vending machines
- Vending machines that contain non-perishable goods
- Indoor vending machine locations
- Machines located in areas without constant activity

How do you participate?

Just follow these easy steps:

1. Complete the VendingMiser Rebate application.
2. Submit your completed application for approval before ordering the VendingMiser.
3. After your VendingMiser is installed, submit the invoices. We will issue your rebate check upon post-inspection.

Rebate funds may be limited, so please contact us to confirm availability. Maximum VendingMiser rebate amounts are determined based on customer usage per address, per year.

Specific terms and conditions can be found on the back of the VendingMiser Rebate application.
